Gestation stalls

## Description

**The 066 Swing gestation stall is a type of cage free access according to the latest rules of confinement of pigs and to European guidelines and animal welfare legislation.**

Free access of animals to their will.

Quick adaption to movements in and out.

The stall 066 is presented as a very representative model, with simple lines and adaptable to multiple rear door possibilities.

It is designed to use a suspended linear stainless steel trough.

It also comes in different lengths.

À

## Materials

Tube 33,4x2; plate 40x8; plate 30x8; tube 40x40

## Technical characteristics

- Three positions: closed, open and in position to swing with free entry and exit.
- Optional management from the end of the line by fixing union arcs.
- Simple free access system, reliable and cheap.
- Rear foot height adjustment (optional).
- 40x40 end tube allowing inclusion of spacers and modularity.
- Possibility of replacing the swing free-access door with another one with simple sticks closure, elevated door etc.
